

SMART INVENTORY & EQUIPMENT MANAGEMENT

An intuitive app for inventory management and equipment sign-out, tailored to the needs of military, law enforcement, and alike. Intact centralizes essential data, giving full control over equipment, its users, location, and status.

SMART INVENTORY MANAGEMENT

Full digitization of organizational inventory, allowing precise tracking of each item, its assigned user, and its current location. The system provides real-time updates on equipment status and quantities, ensuring accurate and organized inventory management.

DIGITAL EQUIPMENT SIGN-OUT & RETURNS

The app enables fast, accurate digital sign-out and return of equipment. Each transaction is linked to the item and user, providing a complete record with dates and history. QR codes can be printed and scanned to streamline the process. Everything is handled efficiently and intuitively.

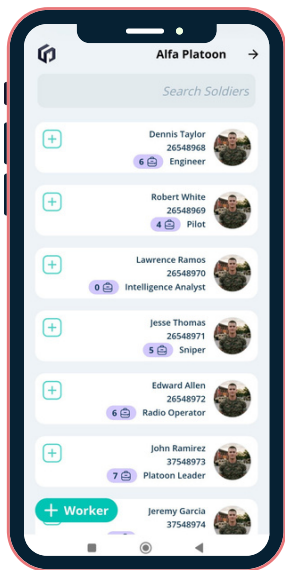

MANAGING REPAIRS, WEAR AND TEAR & LOSS

The system enables full tracking of equipment wear and tear, repairs and lost items while maintaining a detailed record for each item, including dates, photos, and notes. This ensures organized management and improved long-term oversight.

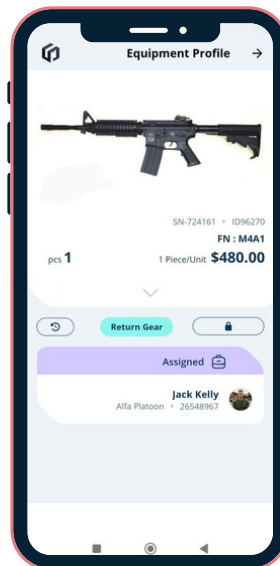

SMART INVENTORY MANAGEMENT

Digital management of equipment allows real-time tracking of inventory, showing items in stock, assigned items, and users. Without proper tracking, mistakes, confusion, and uncertainty about user responsibility can arise. Intact centralizes all data in one place, ensuring an organized and more efficient workflow.

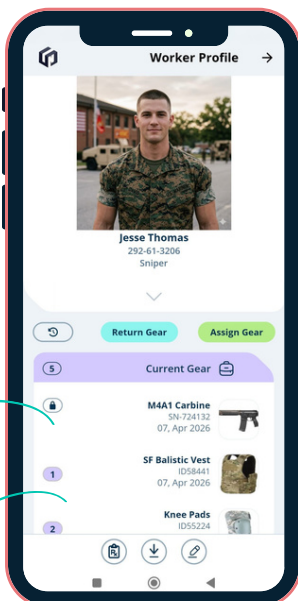

USER MANAGEMENT & SIGN-OUTS

The system provides an organized user list. Each user has a detailed profile displaying all the equipment assigned to them. This allows for a clear understanding of equipment location at any given time.

EQUIPMENT TRACKING & MONITORING

The equipment list is sorted by categories and provides detailed information on each item. Every piece of equipment has a unique profile displaying its details, assigned user, usage history, and current status.

EQUIPMENT CATEGORY CUSTOMIZATION

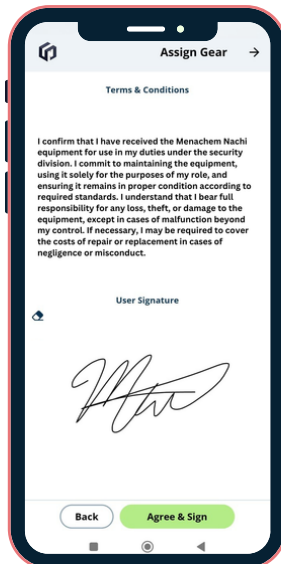

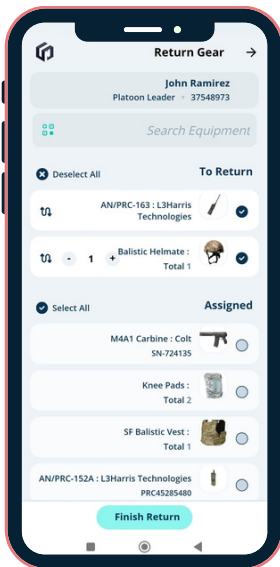

Each item in the system is categorized based on how it is managed: Trackable Equipment, Non-Trackable Equipment, and Disposables.

- Trackable equipment is identified by a unique serial number, allowing precise control over each unit.
- Non-trackable equipment is managed by quantity, such as clothing or general gear.
- Disposables are recorded with a usage history but do not require returns.

This classification provides flexibility and enables effective management of all types of equipment within the organization.

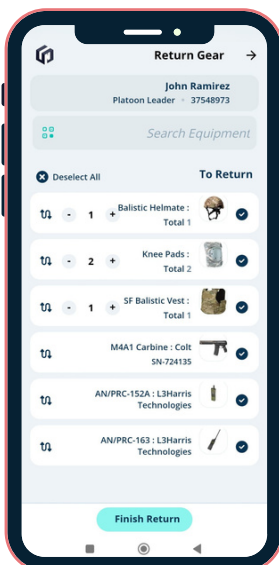

DIGITAL SIGN-OUTS & RETURNS

Manual sign-out and return processes waste time and create inefficiencies. With Intact, all data is already in the system, eliminating the need to manually enter user and equipment details. The sign-out and return processes are quick and simple, with optional QR code scanning. Upon return, equipment is automatically registered back in its designated location, preventing errors and unnecessary searches.

FAST & SECURE SIGN-OUT

The equipment sign-out process is fully digital, eliminating the need for paperwork or manual records. With just one click, users can sign out equipment, with the option to scan a QR code for faster processing and error prevention. Every sign-out is recorded in the item and user history, including a neatly formatted PDF with all details and a digital signature, ensuring full oversight of equipment.

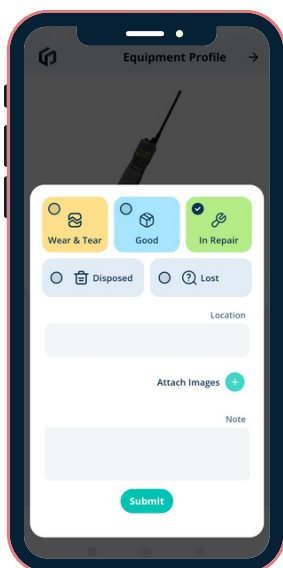

FAST & ACCURATE EQUIPMENT RETURNS

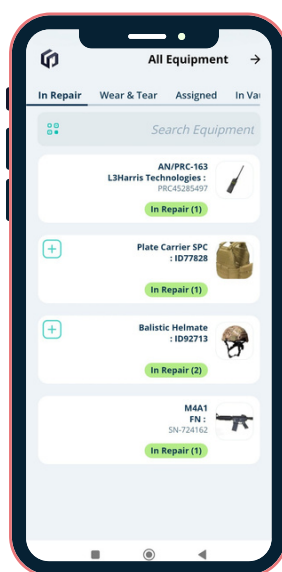

When returning equipment, the system immediately processes the return and restores the item to its original storage location by default. Alternatively, items can be marked for disposal, repair, or loss based on their condition. This ensures the organization maintains order and efficient tracking of all equipment.

TRACKING REPAIRS, WEAR & LOST EQUIPMENT

Inventory lists and sign-out records alone don't provide enough oversight when equipment is under repair, marked as worn out, or lost. Without proper tracking, stock miscalculations can happen, leading to last-minute shortages. Intact offers full control over every item, with detailed documentation of repairs, wear status, and losses—ensuring a clear view of what's available, what's being repaired, and what's out of service.

With Intact, equipment can be sent for repair, marked as worn out, or reported as lost with a single click, while maintaining an organized tracking system. For equipment under repair, the system provides full documentation of the process, including the send date, repair location, issue description, relevant images, and repair documents. This ensures complete visibility into the item's status at all times.

All items marked for repair, wear and tear, or loss are stored in an organized list for easy tracking and efficient management. If an item is marked as worn out, the system alerts users to take action. For equipment under repair, the list records when it was sent and where it is, helping to ensure its timely return. Additionally, expiration date tracking helps anticipate equipment nearing the end of its lifespan, keeping functional gear readily available.
